

# WEBSITE DEVELOPMENT BRIEF

Frontend V1 • Corporate Website • Sarawak

|                 |                                                        |
|-----------------|--------------------------------------------------------|
| Company         | Eastern World Technology (EWT)                         |
| Registration    | 202501010006 (1611420-T)                               |
| Positioning     | Sarawak-focused Technology Project & Solutions Company |
| Working Tagline | Technology, Structured for Business.                   |

Purpose: give the developer a clear, build-ready direction for EWT's first public-facing website. The site must feel premium, credible and project-led, while remaining simple and frontend-only.

# 1. Brand & Positioning

**Eastern World Technology is not to be presented as a generic web-development agency.** The website should position EWT as a Sarawak-focused technology project, consultancy and solutions company capable of receiving a client requirement, structuring the project, coordinating the necessary expertise and delivering an appropriate technology solution.

The identity must remain independent. Do not copy another company's wording, project portfolio, visual language or service structure.

## Core positioning

- Sarawak-only market positioning for the current phase.
- Primary audience: Sarawak government-related organisations, GLCs, established enterprises and larger organisations.
- Secondary audience: selected private-sector organisations with suitable technology projects.
- Enterprise/government-friendly tone: structured, credible, conservative and procurement-ready.
- Project-led rather than product-led: the client brings a requirement or challenge; EWT structures and delivers the technology engagement.

## MSIC scope

| Code  | Scope                                           |
|-------|-------------------------------------------------|
| 62010 | Computer programming activities                 |
| 62021 | Computer consultancy                            |
| 62099 | Other information technology service activities |

## Working brand line

**Technology, Structured for Business.**

## 2. Website Objectives

- Establish EWT as a credible Sarawak technology project company.
- Make it immediately clear that organisations can approach EWT with a project, requirement or technology challenge.
- Present EWT's capabilities at an enterprise level without over-claiming experience.
- Create a professional destination that can be shared after meetings, introductions and project discussions.
- Generate direct project conversations through the CEO's WhatsApp.
- Provide a structure that can later showcase genuine EWT projects and case studies.

### Primary conversion

The main action across the website is **Discuss a Project**. This should direct visitors to the CEO's WhatsApp. A floating WhatsApp button should remain available across the site.

### Suggested pre-filled WhatsApp message

"Hi Wesley, I came across Eastern World Technology's website. I'd like to discuss a potential project with EWT."

**CEO WhatsApp number: TBD before launch.**

## 3. Visual Direction

The site should look like a premium corporate technology consultancy suitable for enterprise and government-facing discussions - not a flashy startup landing page.

### Design language

- Primary palette: deep navy / corporate blue.
- Backgrounds: white and very light grey.
- Accent: subtle silver; restrained gold may be used only if consistent with the final logo.
- Generous whitespace, strong grid, clean typography and restrained motion.
- High-quality Sarawak/corporate imagery may be used sparingly; avoid tourism-style treatment.
- No excessive neon, gaming-style effects, noisy gradients or generic 'hacker/code' visuals.
- Desktop and mobile layouts must both feel polished.

### Logo direction

Use the supplied EWT logo concept as the current brand reference. The logo direction is premium, corporate, international and technology-oriented, with EWT as the main mark and Eastern World Technology as the full company name.

## 4. Recommended Website Architecture

| Page                        | Purpose                                                                        |
|-----------------------------|--------------------------------------------------------------------------------|
| Home                        | Position EWT quickly, show project capabilities and drive project discussions. |
| About EWT                   | Explain the company, Sarawak focus, philosophy and project-led approach.       |
| Capabilities                | Show the categories of technology projects EWT can structure and deliver.      |
| Projects                    | Dedicated future portfolio/case-study area. Do not invent completed projects.  |
| Leadership                  | Founder profiles for Wesley Chai and Edwin Ting.                               |
| Contact / Discuss a Project | Simple conversion page centred on CEO WhatsApp.                                |

### V1 scope rule

**Frontend only.** Keep the build simple. No CMS, admin dashboard, customer login, payment system or complex backend is required for Version 1.

# 5. Home Page - Section-by-Section

## 01 - Hero

### Eastern World Technology

Technology, Structured for Business.

A Sarawak-focused technology project and solutions company helping organisations turn requirements into structured, implementable technology projects.

**Primary CTA:** Discuss a Project   **Secondary CTA:** Explore Capabilities

## 02 - What EWT Does

Short explanation that EWT works with organisations to understand technology requirements, define the appropriate solution, plan the engagement and coordinate implementation.

## 03 - Project Capabilities

- Digital Transformation Projects
- Enterprise Technology Projects
- Systems Integration
- Custom Business Systems
- Technology Consultancy & Advisory
- Data & Dashboard Solutions
- Process Automation
- Corporate Digital Platforms
- Technology Implementation
- Managed Project Support

## 04 - Why EWT

- Understanding of the Sarawak operating environment
- Structured project planning and delivery
- Solutions tailored to actual organisational requirements
- Ability to coordinate the appropriate technology expertise
- Implementation-minded approach, not consultancy-only
- Long-term support mindset

## 05 - Sarawak Focus

Position EWT as contributing to technology adoption and modernisation in Sarawak across digital transformation, enterprise systems, automation, data and technology implementation. Do not claim government appointments, partnerships or completed work unless approved.

## 06 - Leadership Preview

Show Founder & CEO Wesley Chai and Founder & CTO Edwin Ting with professional photography and links to the Leadership page.

## 07 - Final CTA

**Have a technology project or requirement?**

Speak directly with EWT to discuss the scope and next steps.

**Button:** Discuss a Project with Our CEO

## 6. Capabilities Page

Capabilities should be described as project areas rather than a menu of cheap standalone development services. Each capability card can contain: **What it is / When it is useful / Typical project scope / Expected EWT involvement.**

### Recommended categories

- **Technology Consultancy & Advisory** - requirement discovery, technology assessment, solution planning and project scoping.
- **Digital Transformation** - modernising manual or fragmented processes through appropriate technology.
- **Enterprise & Custom Systems** - tailored internal systems, portals, workflow platforms and operational tools.
- **Systems Integration** - connecting existing platforms, data sources, APIs and operational systems.
- **Automation & Process Improvement** - reducing repetitive work and improving operational visibility.
- **Data & Management Dashboards** - consolidating operational information into decision-support interfaces.
- **Corporate Digital Platforms** - web-based platforms and digital touchpoints designed around organisational requirements.
- **Technology Implementation & Project Support** - coordinating implementation, testing, deployment and ongoing support.

## 7. Projects Page

Projects should eventually become one of EWT's strongest credibility assets. At launch, do not fabricate projects or reuse another company's portfolio.

### Launch state

Use a polished project page with a simple message such as **Project Portfolio - Coming Soon**, while keeping the full case-study layout ready for future content.

### Future case-study template

- Project Name
- Client / Sector
- Project Context
- Challenge / Requirement
- EWT Scope
- Proposed / Delivered Solution
- Implementation
- Technology / Partners (where disclosure is approved)
- Outcome / Measurable Impact
- Project Status

### Confidentiality

For enterprise or government-related work, the design should allow projects to be shown as anonymised case studies when client names or sensitive details cannot be disclosed.

## 8. About & Leadership

### About EWT

The About page should communicate that EWT is a Sarawak-focused technology company established to structure and deliver technology projects around real organisational requirements. The tone should emphasise disciplined execution, practical technology adoption and long-term value.

### Leadership

#### **Wesley Chai - Founder & CEO**

Public-facing business and project leadership. Bio copy can remain concise until final background wording is approved.

#### **Edwin Ting - Founder & CTO**

Technology and technical-delivery leadership. Bio copy can remain concise until final background wording is approved.

Do not overstate credentials, project history, awards, partnerships or client relationships. Use only verified/approved information.

## 9. Contact, Footer & Company Information

### Public information for V1

|                  |                          |
|------------------|--------------------------|
| Company          | Eastern World Technology |
| Registration No. | 202501010006 (1611420-T) |
| CEO WhatsApp     | TBD                      |
| Business Hours   | TBD                      |

### Footer recommendation

Keep the footer minimal: logo, short company descriptor, navigation, registration number, business hours and CEO WhatsApp CTA. Do not add unnecessary contact information unless later approved.

## 10. Frontend Development Requirements

- Responsive across current desktop, tablet and mobile breakpoints.
- Fast initial load; compress and appropriately size all imagery.
- Semantic HTML structure and clean heading hierarchy.
- Basic on-page SEO: unique title and meta description per page, Open Graph metadata and sensible URL structure.
- Accessible colour contrast, keyboard-usable navigation and meaningful alt text for content images.
- Sticky or clearly accessible navigation on mobile.
- Floating WhatsApp CTA across primary pages.
- Subtle scroll/hover transitions only; motion must not distract from the corporate tone.
- Projects page designed so static project cards can be added easily later without redesigning the site.
- No backend, CMS, authentication, payment flow or admin system in V1.

# 11. Content & Credibility Rules

- Keep language confident but factual.
- Do not claim EWT has delivered projects that have not been delivered by EWT.
- Do not claim government/GLC partnerships, approvals, panels or appointments unless verified.
- Avoid generic claims such as 'industry-leading' or 'No.1' without evidence.
- Write for decision-makers: focus on requirements, outcomes, implementation and reliability.
- Avoid making the website feel like a low-cost website/app development shop.
- Keep Sarawak identity visible but sophisticated; EWT is a technology company, not a tourism brand.

## Tone examples

**Preferred:** "We structure technology around the needs of the organisation."

**Avoid:** "We build awesome apps and websites for everyone."

# 12. Developer Handover Checklist

## Build now

- 6-page frontend structure
- Responsive header/navigation
- Corporate hero and section layouts
- Capabilities cards/sections
- Static Projects page with future-ready card/case-study layout
- Leadership profiles
- Contact / Discuss a Project page
- Floating CEO WhatsApp button
- Footer with company registration details
- Basic SEO/meta setup
- Mobile optimisation and performance pass

## TBD before final launch

- Final CEO WhatsApp number
- Business hours
- Final approved logo file/variants
- Founder photographs
- Final founder biography wording
- Any first approved EWT project/case study
- Final domain and production hosting details

## Final direction

**The finished site should make a Sarawak enterprise or government-related decision-maker feel that EWT is a serious, structured technology project company worth speaking to about an upcoming requirement. Keep Version 1 simple, fast and premium.**
